

Julia KOROLEVA

WEB-DEVELOPER

ABOUT ME:

I have been professionally engaged in Frontend development for more than one year. I am constantly learning new tools and technologies. In my work, I give preference to finding suitable tools for solving specific problems rather than trying to solve a problem with already known, but less suitable means. I have experience in team work in accordance with the Agile methodology. I organize the code base of developed projects according to BEM principles. At the moment I am immersed in learning TypeScript.
